

WIRED ZML MUSIC PLAYER SETUP DIRECTIONS

You will need **3** componets to setup the ZML Player.

1. A laptop or computer device connected to the internet
2. Stereo Receiver connected to speakers
3. One RCA Mini Cable

The entire setup only takes a few minutes to complete to have great music playing in your location. We created very simple instructions with photos to show you how easy it is to setup the ZML Player.

1

After the sign in process is complete, you will have access to the ZML Music Player. Login and try any channel first to make sure you are hearing the music from your computer device. If you can hear music from the internal speakers from your computer then you are ready to link to your stereo system in your location.

2

You will need one RCA Mini Jack. This item is under \$10.00 and can be found at electronic and hardware retail stores.

RCA Mini Jack

3

Connect the **RCA MINI PHONO CABLE** to the **HEADPHONE OUTPUT** of your laptop or your desktop PC.

Output on computer

Now attach the **RCA Mini Phono Cable** to the **AUX INPUT** on the back of your receiver or amplifier. Be sure to color match the red and white of the **RCA MINI JACK** to the **INPUT** on the stereo.

Input on stereo

4

Turn up the sound on your computer to 3/4. This provides a good audio signal to the stereo receiver. A low output from the computer makes the stereo receiver work harder. Next, turn up the stereo receiver until you have the right balance and tone in your location.

Turn Off The Beeps And Chirps From Your Computer

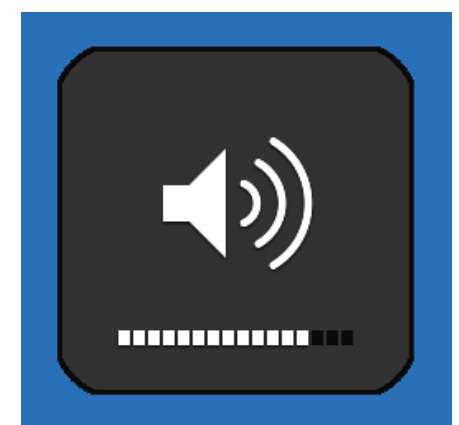

If you will be using your PC/laptop for other functions while streaming music, we recommend shutting off all internal audio effects. These are the audio sound beeps the computer makes to notify you of email or mistakes. On most operating systems, go to Control Panel, choose Hardware and Sound, then change your sound scheme to "No Sounds". Now your computer will play music, but not beep everytime a email arrives.

Hey Computer, No Sleeping on the Job!

If your computer goes to sleep then the music will stop. Set your computer to stay awake and keep playing the music!

Great Job!

**You have completed the ZML Music Lab setup.
Enjoy the music!**

Computer sound set to 3/4
