

WIRELESS ZML MUSIC PLAYER SETUP DIRECTIONS

You will need **2** componets to setup the ZML Player.

- 1. A laptop, tablet or mobile device connected to the internet.
- 2. Wi-Fi or Bluetooth Wireless speakers or system.

The entire setup only takes a few minutes to complete to have great music playing in your location. We created very simple instructions with illustrations to show you how easy it is to setup the ZML Player.

1

After the sign in process is complete, you will have access to the ZML Music Player. Login and try any channel first to make sure you are hearing the music from your laptop, tablet or mobile device. If you can hear music from the internal speakers from your laptop, tablet or mobile device then you are ready to link to your wireless stereo system in your location.

2

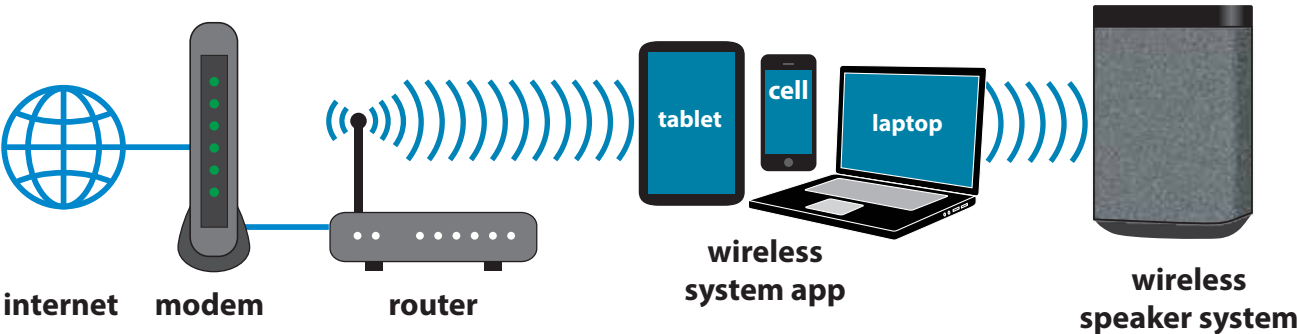

A wireless audio system is audio components that play sound wirelessly via Bluetooth, Wi-Fi or AirPlay. This can seem intimidating at first, but it's relatively easy to set up. The components within an audio system connect to a **dedicated wireless network** and are controlled with an **app** that can be downloaded to your smartphone, tablet or computer. **The app is created by the maker of the wireless audio system to control the wireless audio hardware. The apps are always free to download by the audio maker of your wireless system.**

SONOS

3

The app of the audio system needs to be able to connect to the internet and login to the ZML Music Player. Once your app can link to the Zingg Music Lab Player you will be able to play music on your wireless system in your location.

THIS MAY NOT BE TRUE

Turn up the sound on your computer, tablet or mobile device to 3/4. This provides a good audio signal to the wireless audio system. A low output from the computer devices makes the wireless audio system work harder. Next, turn up the stereo receiver untill you have the right balance and tone in your location.

Dan Help

Turn Off The Beeps From Your laptop, tablet or mobile devices.

If you will be using your computer devices for other functions while streaming music, we recommend shutting off all internal audio effects. These are the audio sound beeps the computer makes to notify you of email or mistakes. On most operating systems, go to Control Panel, choose Hardware and Sound, then change your sound scheme to "No Sounds". Now your computer will play music, but not beep everytime a email arrives.

No Sleeping on the Job! THIS MAY NOT BE TRUE

If your laptop, tablet or mobile device goes to sleep then the music will stop. Set your computer to stay awake and keep playing the music!
